Safe, Professional and Ethical IT Recycling

Data Destruction

The Process

We destroy all data passed to us safely and securely. Any erasable functioning media is wiped using a multipass binary overwipe. Any non-functioning or non-erasable media is degaussed or shredded. Whichever method is used, the data is completely and irretrievably destroyed. The destruction process meets or exceeds many internationally recognised standards including the UK's Communications–Electronics Security Group's (CESG's) HMG Infosec Standard No. 5 and US Army AR380-19 DoD 5220.22 M. A data destruction certificate is provided at the end of the process.

Certification

All data is processed in the same way, but we offer different levels of certification:

Standard: A general certificate covering the list of equipment processed, stating all data passed to us has been destroyed.

Premium: A detailed certificate comprising lists of asset tags or serial numbers. This carries a cost of £6 per item.
